Hartington Telecommunications Co., Inc.
Ability to Remain Functional in Emergency Situations

1. Hartington Telecommunications Co., Inc. has been providing high quality service in northeast Nebraska since 1905. This includes operating in adverse conditions including blizzards, ice storms, thunderstorms, tornadoes and during prolonged power outages. Hartington Telecommunication's management team, plant supervisors, plant technicians and customer service representatives have the training, experience and equipment necessary to respond to, manage and operate in emergency situations.
2. Hartington Telecommunications Co., Inc. follows applicable Rural Utilities Service (RUS) Telecommunications program practices and guidelines including the Telecommunications Engineering and Construction Manual (TE&CM) and other industry standards available to small telecommunications carriers. Hartington Telecommunications Co., Inc. also meets the requirements of the Nebraska Public Service Commission (NPSC) as applied to local exchange service.

3. Back-Up Power

3.1. Central Office

- 3.1.1. Hartington Telecommunications Co., Inc. maintains storage batteries designed to provide a minimum reserve capacity consistent with RUS TE&CM 1751E-302, Power Requirements for Digital Central Office Equipment. 1751E-302 paragraph 2.3.4 recommends a minimum reserve capacity of 8 hours, or 3 hours if the central office is equipped with an emergency standby generator. This is consistent with Title 291, NPSC Telecommunications Rules and Regulations, Chapter 5, paragraph 002.05 Emergency Operations and Power.
- 3.1.2. Hartington Telecommunications Co., Inc. maintains a dedicated standby generator fueled with a 1000 gallon reserve supply of diesel fuel. The standby unit is equipped with an automatic transfer switch so that in the event of an interruption of the commercial electric power lasting more than a few minutes, the standby generator starts automatically and provides electrical power to the central office equipment, air conditioning and building lighting. The automatic transfer switch also exercises the standby unit periodically and an alarm indication is sent if the standby generator does not start so that telecommunications personnel can perform proactive maintenance.

Hartington Telecommunications Co., Inc.
Ability to Remain Functional in Emergency Situations

3.2. Remote Equipment Cabinets

- 3.2.1. Where electronic equipment in cabinets located remotely from the central office, is used to provide service, the cabinets are equipped with batteries designed to operate for a minimum of eight hours without commercial electrical power. In addition, Hartington Telecommunications Co., Inc. maintains portable AC standby generators for use in the event of prolonged commercial power interruptions and the cabinets are equipped with external receptacles to facilitate connection to portable generators.

3.3. Optical Network Terminations (ONT's)

- 3.3.1. Where Fiber-to-the-Premises (FTTP) technology has been deployed the ONT's are powered by micro-uninterruptable power supplies (UPS) located on the customer premises and powered from the customer's commercial electrical power. The UPS batteries are specified for a minimum of eight hours of reserve capacity. The FTTP electronics system monitors the ONT's and notifies Hartington Telecommunication's maintenance personnel when any ONT's batteries are no longer capable of holding the charge required for the designed battery reserve capacity so that Hartington Telecommunications can work with the customer to replace the UPS batteries. Hartington Telecommunication's also maintains a cache of UPS's for routine and emergency replacement.

4. Rerouting Traffic around Damaged Facilities

- 4.1. In the event of damage to facilities owned by Hartington Telecommunications Co., Inc., our maintenance personnel would restore service using emergency splice kits kept on hand for these types of service disruptions. If the damaged facilities are not owned by Hartington Telecommunications Co., Inc. we would work with the carrier directly affected to identify the source of disruption and the estimated amount of time before service is restored.
- 4.2. In the event of an extended outage, contact would be made with another service provider which has a separate, physical cable connection with Hartington Telecommunication's to provision temporary alternate routes supporting originating and terminating toll calls. Emphasis would first be placed on

Hartington Telecommunications Co., Inc.
Ability to Remain Functional in Emergency Situations

establishing connections to nearby PSAP, law-enforcement and emergency services.

5. Managing Traffic Spikes

- 5.1. Hartington Telecommunications Co., Inc. meets Title 291, NPSC Telecommunications Rules and Regulations, Chapter 5, paragraph 002.12 Dial Service Objectives for sufficient central office capacity and equipment during the "...average busy hour-busy season..."
- 5.2. Hartington Telecommunications Co., Inc. follows applicable RUS practices 522 and 322 when specifying, administrating, and assigning facilities within its control (as opposed to facilities ordered by connecting interexchange carriers).
- 5.3. The Hartington central office switch is a Genband C15 soft switch operating at the release 11 software level. The Hartington C15 is equipped with 1250 access lines. The C15 is designed to support up to 20,000 access lines by adding line and trunk interface equipment. In its current configuration the Hartington C15 has additional capacity over and above the minimums specified to meet NPSC and RUS guidelines.
- 5.4. When traffic volumes greatly exceed specified criteria and additional capacity of the switch or connecting facilities, the C15, like other modern switching platforms, continues to process calls but with potentially longer waiting times for dial tone, higher post-dialing delays and a higher probability of callers receiving all trunks busy indications (fast busy) and having to redial calls. Depending on the magnitude and duration of extreme peak demand, Hartington Telecommunication's would examine alternatives such as provisioning additional facilities and work with connecting carriers to expedite additional capacity.
